

About IPCC:

The [IPCC](#) is a scientific intergovernmental body set up by the [World Meteorological Organization](#) (WMO) and by the [United Nations Environment Programme](#) (UNEP). IPCC assesses the scientific, technical and socio-economic information relevant for the understanding of the risk of human-induced climate change. Because of its intergovernmental nature, the IPCC is able to provide scientific technical and socio-economic information in a policy-relevant but policy neutral way to decision makers. When governments accept the IPCC reports and approve their Summary for Policymakers, they acknowledge the legitimacy of their scientific content.
